# UW Benchmarking Spurious Correlations in Multi-modal LLMs

Working on a multimodal benchmark showing that spurious correlation is hard to even the very large proprietary models. Proposed methods to improve model robustness to out-ofdistribution spurious correlations.

### **UW** Improving Robustness to Spurious Correlations with Concepts

Existing works on spurious correlations require group labels. Introduced a framework that first uses out-of-distribution examples (which can be created with one line of prompt) to infer group labels, then applies robust training methods with the inferred group labels to improve worst-group accuracy. Paper

Accepted to CVPR 2024

- SONY AI Bias Propagation in Knowledge Distillation for Vision Models
  Showed that fairness properties transfer from teacher to student model in knowledge distillation.
  - UW Surfacing Gender Bias of Vision-Language Models
    Showed that CLIP-based models tend to objectify women through a series of experiments (e.g. embedding association tests).
    Preprint <a href="https://arxiv.org/abs/2212.11261">https://arxiv.org/abs/2212.11261</a>
    Accepted to FAccT 2023
